

Public Review of Draft Boulder County Floodplain Maps

January 10, 2017
Boulder, CO

HOUSEKEEPING

- Sign-in sheet
- Newsletters & Flyers
- Locator Map (add your dot!)

Tonight's Agenda

1. Introductions
2. Meeting Goals
3. Program Overview
4. Boulder County's Role
5. Data Overview
6. Online Resources
7. To the Tables!

Introductions

- Erin Cooper, Boulder County
- Varda Blum, Boulder County
- Corey Elliott, CWCB
- Geoff Uhlemann, AECOM (CWCB)
- George Gerstle, Boulder County
- Kevin Doyle, Michael Baker Intl.
- Garry Sanfaçon, Boulder County
- Boulder County Support Team

Meeting goals:

1. Inform residents & landowners (you!) of the remapping process
2. Provide opportunity for public comment before the FEMA appeal period

Colorado Hazard Mapping Program

Why is this study being conducted?

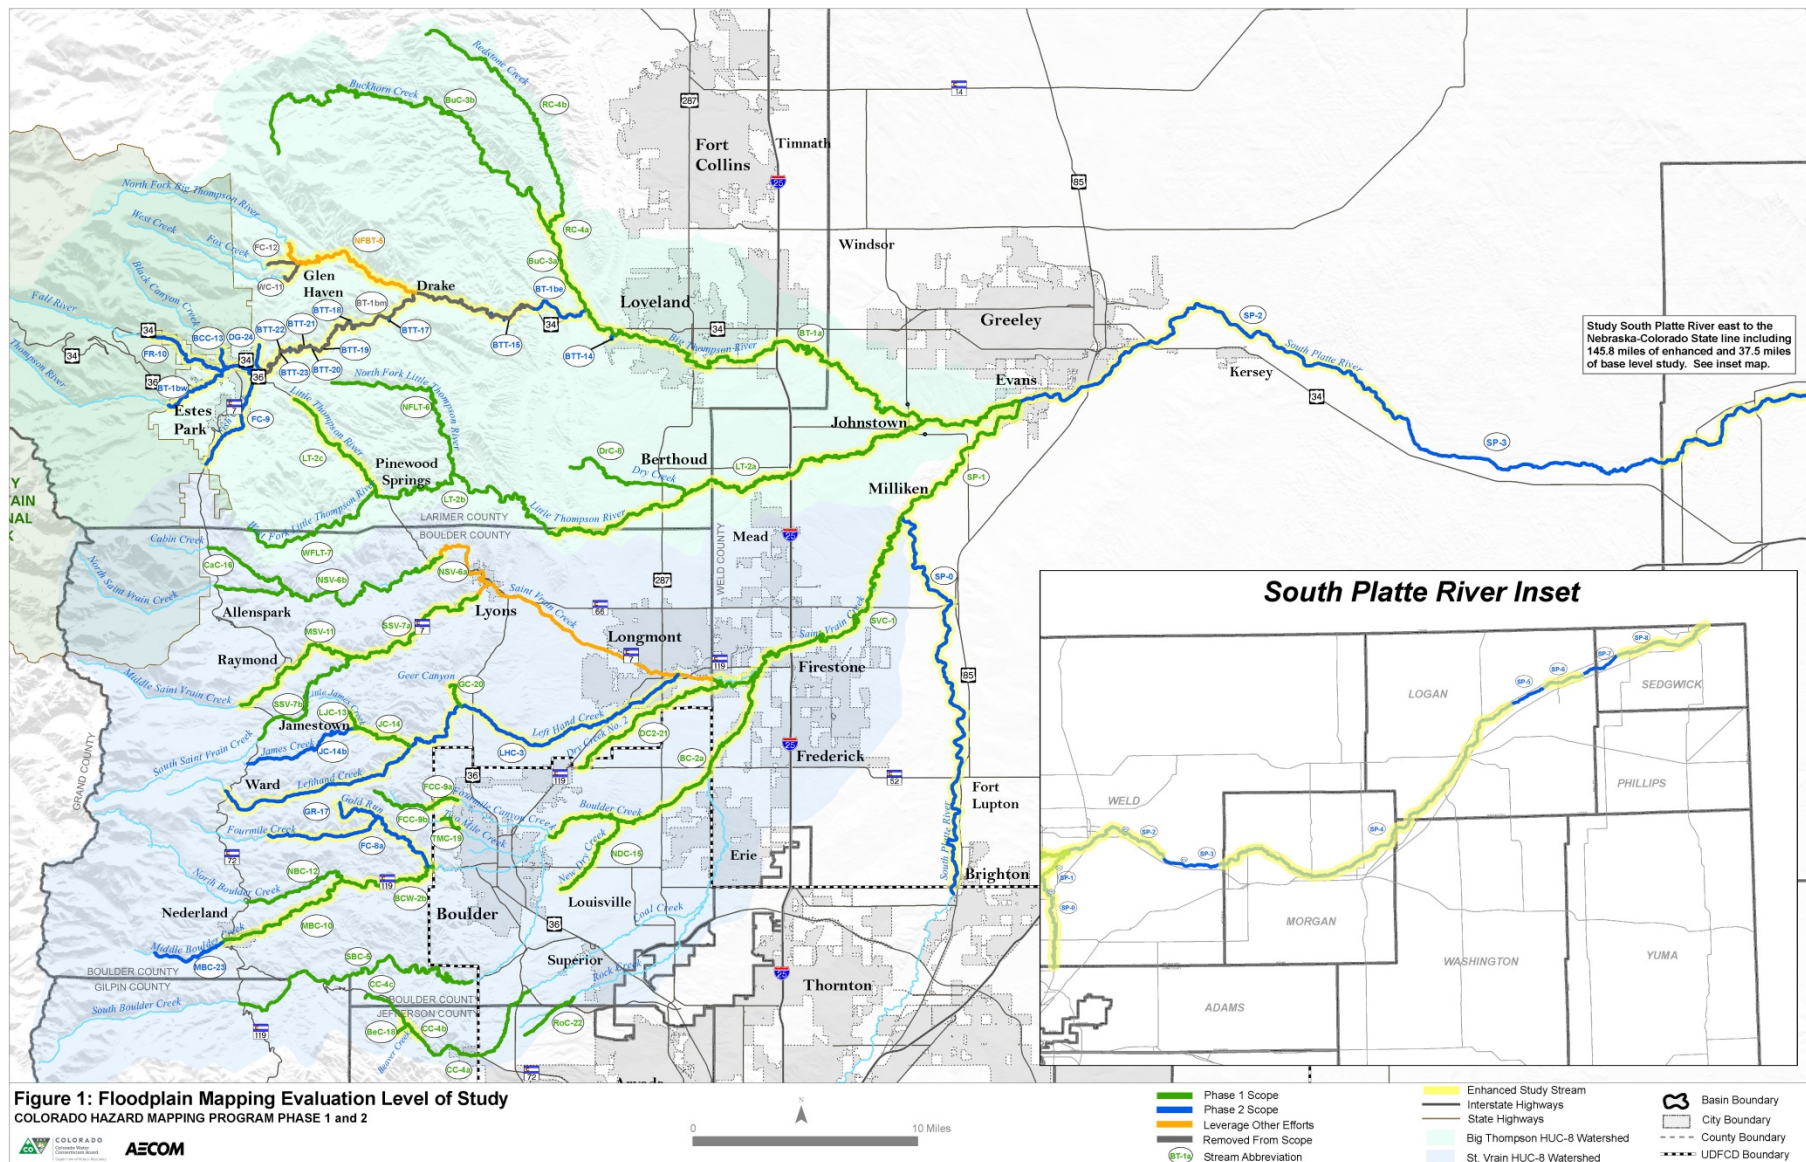

- Hazards change
- Floodplain delineations are often outdated and incorrect
- Maps regularly updated across the country by FEMA, States, Communities
- The State of CO initiated CHAMP after the Flood of 2013
 - Changes to flooding characteristics
 - Changes to understanding of rainfall

Why does it impact you?

- Know if you are at risk for flood hazards
- Will revise Flood Insurance Rate Maps that impact insurance rates (based on risk)
- Regulation is related to flood zone/floodway

Where will there be changes?

Floodplain Mapping CO Hazard Mapping Program [change ▾](#)

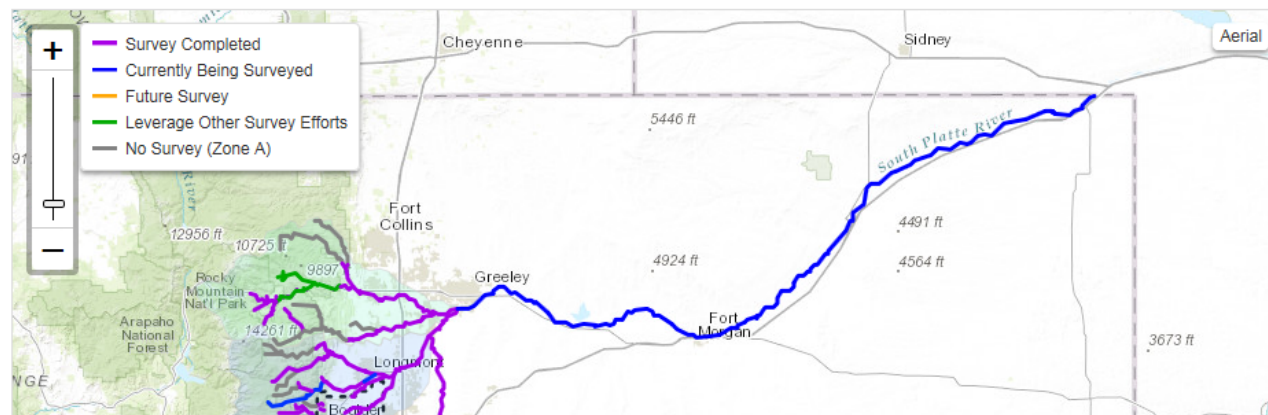

This page is dedicated to showing the latest news and information regarding the CO Hazard Mapping Program Floodplain Mapping.

About the Project

Following the September 2013 flood disaster, Colorado has taken steps toward long-term planning and resiliency efforts for flooding and other natural hazards. In early 2015, Colorado's Legislature passed a funding bill for the Colorado Hazard Mapping Program, which aims to provide a mitigation and land use framework in areas likely to be affected by future flooding, erosion, and debris flow events.

The Colorado Hazard Mapping Program is to prepare updated hazard information for the streams most affected by the September 2013 flooding, beginning in the Big Thompson & St. Vrain watersheds as well as the South Platte River. The work includes field reconnaissance and survey, creating terrain models from updated topographic datasets, evaluating hydrology (flows), and modeling to produce flood hazard area limits reflecting the changed conditions. Community leaders will use the updated hazard information to assess risk and identify mitigation opportunities in their community. The updated information is also intended to eventually be used to update Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM), which are used to determine flood insurance requirements.

The Colorado Water Conservation Board (CWCB) is the lead agency coordinating the Colorado Hazard Mapping Program. CWCB is working with AECOM, a nationally-recognized engineering firm, to conduct the technical work.

Project News and Events

Boulder County Floodplain Mapping Public Meeting Community Meeting Scheduled

12/13/2016 – Boulder County Transportation and the State of Colorado will host a public meeting to present recently updated draft floodplain maps from the Federal Emergency Management Agency (FEMA) and the Colorado Hazard Mapping Program (CHAMP). This initial meeting will review map information for North and South St. Vrain creeks and St. Vrain Creek from Longmont Dam Road and Red Gulch Road to Lyons and from Lyons east toward Airport Road in unincorporated Boulder County. Residents along these creek stretches and other interested parties are invited to attend a public presentation that will be followed by an interactive map review session with state and county staff. Field Reconnaissance & Survey

Survey data is used to determine precise elevations and dimensions of portions of the floodplain and to verify and refine topographic data. The project team is currently conducting detailed field reconnaissance and survey of the specific study area.

Topographic Data Development

Topographic data is data used to model the surface of the earth. The study team will leverage existing topography (see [lidar availability on the full map page](#)) and will also be collected, approximately 7 square miles in Loveland, CO.

Hydrology

Hydrology is used to determine the amount of water flow anticipated in each stream. The study team will calculate new peak flood discharges for the 10%, 4%, 2%, 1%, '1% plus' and 0.2% annual chance events for 73 miles of study in the Big Thompson Watershed and 58 miles in the St. Vrain watershed.

Hydraulics

Hydraulic models are created to calculate the depth of water anticipated during flood events. Hydrologic results are used along with survey and topographic data to model stream behavior.

Floodplain Mapping

Flood Hazard Mapping involves plotting the extents of calculated water surface elevations on maps using hydraulic model results and topographic data. These maps can be used by community leaders to identify hazard mitigation opportunities and make development decisions. It's anticipated that this data will eventually be used to update FEMA's Flood Insurance Rate Maps.

Colorado Hazard Mapping Program

What happens next?

- There are still multiple reviews that will occur, so data is subject to change
- Boulder County being proactive to bring this information to you in draft form
- This is a first look for you to get your input well in advance of data finalization

When will changes go into effect?

- CHAMP team will review comments
- FEMA will review data in spring 2017
- Data will be put onto preliminary Flood insurance Rate Maps in fall 2017
- A formal 90 day appeal period will commence where anyone can appeal maps with technical data
- Once resolved, maps will be released as final (effective), likely late 2018/early 2019

Boulder County's role

- Encourage community input to improve map accuracy
- Early adoption to promote health & safety of residents

N 95th St. between Lookout & Valmont

Flows Experienced & Modeled

Modeled Discharges of the 100-yr Flood Event

Dry Creek No. 2 (@ 107 th St)	<ul style="list-style-type: none">• Newly Modeled – 4,622 cfs (78% increase)• Effective FEMA – 2,600 cfs
Fourmile Canyon Creek (@ Pinto Dr)	<ul style="list-style-type: none">• Newly Modeled – 2010 cfs (0% change)• Effective FEMA – 2010 cfs
New Dry Creek (@ Boulder Creek Confluence)	<ul style="list-style-type: none">• Newly Modeled – 1,908 cfs (47% increase)• Effective FEMA – 1,300 cfs
St. Vrain River (@ Airport Rd)	<ul style="list-style-type: none">• Newly Modeled – 13,200 cfs (38% increase)• Effective FEMA – 9,580 cfs

Estimated Peak Discharges Experienced in 2013 Flood

Fourmile Canyon Creek (@ Pinto Dr)	1080 cfs (~ 50yr event)
St. Vrain River (@ Airport Rd)	14,500 cfs (~ 100-yr event)

2013 Flood vs. 100-yr Mapped Floodplain

Roles and Responsibilities

Federal Role (FEMA)

- Flood Risk Mapping
- Flood Risk Management
- Flood Insurance

State Role (CWCB)

- Community assistance
- Flood Risk Mapping

Local Role (Boulder County)

- Flood Risk Adoption
- Enforcement of regulations

Ultimate Goal – Protect Life, Health, & Safety

Timeline revisited

- | | |
|-------------|--|
| Now | Boulder County is reviewing the hydraulics and floodplain mapping |
| Spring 2017 | FEMA will review the hydraulics and floodplain mapping, Boulder County to adopt floodplain as "best available data" |
| Late 2017 | Preliminary Flood Insurance Rate Maps issued |
| Early 2019 | Flood Insurance Rate Maps Effective |

BACKGROUND

The 2013 flood event caused widespread damage and changes along waterways throughout the county and other areas of the state. In response, the State of Colorado is taking steps towards bolstering long-term planning and resiliency efforts by funding the Colorado Hazard Mapping Program (CHAMP) that will update local hazard information including regulatory floodplain maps for the most affected waterways.

Boulder County Colorado

This map is intended to display current Boulder County (Unincorporated Areas) regulatory flood hazard information in-combination with DRAFT flood hazard data provided by the Colorado Hazard Mapping Program (CHAMP). Flood hazard data for incorporated areas within Boulder County (such as the Town of Lyons and the City of Longmont) is provided for informational purposes only.

Users can provide comments on the flood hazard data by using the COMMENT tool to place a point feature for their location of concern and providing feedback in the table once the point is placed. No authentication (sign in) is required.

Click this button in the toolbar in the upper left hand corner to turn map data on or off

Click this button in the toolbar in the upper left hand corner to add comments to map

Click this button in the toolbar in the upper left hand corner for How To instructions regarding comment creation

Basic Instructions:

- > Zoom in on map to where your area of concern is
- > Click on New Comment Symbol (yellow diamond)
- > Move cursor out of Comment Window and place point by clicking on your specific map location
- > Point will be placed (temporarily a red dot) and an Information Window will pop up
- > Populate rows with your information (Name, Date, Address, Email, Phone, and Comment)
- > Click "Close" to save your Point of Concern

- If you accidentally created a point or placed it in the wrong place, you can delete it by clicking on it in the map, scrolling down to bottom of the information window, and clicking Delete.

- Alternatively, you can select it to pick it up and move it
