Attachment A – ASHRAE Level II Scope

PRE-AUDIT	General Building Information
	-size, sqft, use, etc.
	Utility Bills
	-analyze at least 1 yr, prefer 3
	-look for better rate schedule
	-review for irregular or missing data
	Energy Performance Summary
	-develop energy index and cost index for each fuel
	Current EUI
	-compare EUI to other buildings
	Energy Targets
-derive target energy, demand, and cost indices for similar building	
Theoretical EUI	
-compare energy and cost savings if target EUI is reached	
-compare energy and cost savings for each fuel type if target EUI is reached	
-determine if further engineering analysis would be needed if EUI is reached	
PRE-ANALYSIS	Perform walk-through and become familiar with facility
	Meet with owner/operator for operations and problems
	Space-function analysis to determine if function affects efficiency
	Perform rough break-down for significant energy end-use
	Identify low/no cost changes for efficiency and the estimated savings
	Identify potential capital improvements for further study including initial cost savings estimates
	-Plug loads, lighting systems, controls systems
	-Base building systems
-Industrial Processes (if responsible for 25% or more of total energy use)	
PRE-REPORT	Quantify savings potential of a different rate structure
	Discussing irregularities in the bills
	EUI of similar buildings
	Method used to develop target indices
	Total energy and demand cost by fuel
	Fraction of current costs saved to reach EUI target
	Summary of special problems or needs for the facility
	List of low/no cost changes with savings
	List of potential capital improvements including initial costs and savings
	Summary of building use with sqft breakdown and typical operation
General summary of existing building conditions	
LEVEL 2 ANALYSIS	Review mechanical and electrical system design, condition, maintenance, and operation
	Describe and analyze energy-using systems as applicable:
	-Envelope
	-Lighting
	-Plug loads
	-HVAC
	-Domestic Hot Water
-Laundry	
-Food preparation	

	<ul style="list-style-type: none"> -Refrigeration systems -Conveying systems -Pools/saunas/spas -Process loads -Other systems -Industrial Processes (if responsible for 25% or more of total energy use)
	Review operating and maintenance problems
	Measure key operation parameters and compare to design levels (ventilation, scheduling, lighting, etc.) Launch Trends on BAS (1-2 trips)
	Breakdown of total energy use into end-use components
	List all possible modifications to equipment and operations to save energy (List of ECMs)
	Review practical modifications with owner to determine those to analyze and place in order of importance
	Create integrated bundles of measures where successive measures have significant interactive effects. (at least one package that meets savings goals)
	For each measure estimate cost and energy savings. (For interacting changes assume best recommendation is implemented first)
	Estimate cost for each practical measure
	Estimate impact of each measure on operations (O&M Savings)
	Prepare financial evaluation for estimated investment using owner's criteria (LCCA, Simple Payback, etc.)
	Meet with owner/operator to discuss report (1 trip)
LEVEL 2 REPORT	Summary of energy use and cost for each end-use. Include calculations or software used
	Description of the building, including floor plan and major equipment
	List of measures considered, but felt impractical with reasoning
	For each practical measure include existing use, description, effects (both energy and worker), repairs needed, impact on the operations and maintenance costs, description of the new equipment including life, and any changes in operations/skills, calculations, and non-energy benefits
	Table listing all estimate costs, recommended bundles of measures, savings, and the financial performance indicator for each measure. Should include implementation sequence. (CMRs require this and applicable rebates/incentives, demand reductions, annual maintenance savings, and payback period)
	Overall project economic evaluation
	Recommended M&V methods required to determine actual effectiveness of changes
	Discuss feasible capital intensive measures that may require Level 3 analysis
	Complete building description and equipment inventory

	If provider does recommend RCx, provider should provide owner with cost estimate for EA with and without RCx
	A recommended package of measures that would allow the building to achieve ENERGY STAR certification, if applicable. For buildings that are not eligible to receive an Energy Performance Score, recommend a package of measures to reduce annual Energy costs by at least 25 percent
