RE: RFP 7301-22 - Private Property Structural Debris & Hazard Tree Removal Operations

Boulder County Evaluation Team,

On behalf of the team at Western States Reclamation, Inc. (WSR) I would like to thank you for your time and consideration of our proposal for the subject line project. Enclosed in our proposal you will find all required documents, as well as evidence of our qualifications and abilities to perform the project at a level exceeding the County's expectations.

Established in January of 1983, WSR has, for the past 38 years, been an industry leader in post wildfire response. We have traveled across a wide swath of the western United States in response to a multitude of wildfires which left behind nothing but devastation.

This is not an easy project and presents many unique challenges. As such, we have assembled a team of sub-contractors whom we feel are second to none in their craft and understand the care and due diligence required to safely and efficiently clean up the aftermath, but do so with respect to each property owner.

If we can answer any questions regarding our proposal or experience, please do not hesitate to ask. We look forward to partnering with Boulder County and assisting our communities in the first steps of rebuilding.

Lastly, this statement is to acknowledge the sample contract provided in the RFP. As it is currently written, Western States Reclamation, Inc. has no exceptions.

Again, thank you for your time and consideration.

Best regards,

Adam Bappe

NOTES:

1. Refer to column E to determine if price requested is per unit (such as per vehicle or per tree) or per parcel.
2. This is a one-time mobilization (including traffic control, tree hazard crews, asbestos crews, air quality monitoring, and dust control) rate per Disaster Debris Removal Crew for the entire project.
3. The unit price refers to each cubic yard of material that is reduced. The County does not currently anticipate that Contractor will be authorized to reduce material at the DMS or otherwise. Bidders should include a unit price Per CY for material reduction at the DMS in the event that this work is authorized.
4. These items will be paid per parcel. The "Est quantity per parcel" column includes the average estimate of the quantity of each type of material per parcel to help guide your proposal. Calculate the Unit Price using the estimated CY of material multiplied by your proposed CY rate to develop your per parcel rate. For example, in line item 7, there is an estimate of 89 CY of "debris, ash, vegetative, and incidental soil" on each parcel. For a price of \$2.00 per CY, Enter \$2.00 in Column D x 89 = \$178. Enter \$178 in column F.
5. Please calculate line item 13 by multiplying 1,336 by your per vehicle price (Column D) and enter the total into column F.
6. For line items 14 and 15, Column C estimates that there is approximately 1 tree on each parcel.
7. For purposes of calculating line items 16-19, use the whole number 1 as the multiplier, even though column C indicates less than one. It is estimated that there will be less than 1 tree of each size or stump per parcel.
8. For purposes of calculating line items 20-25, please provide your estimated actual costs for disposal or recycling.
9. For purposes of calculating this line item, use the whole number 1 as the multiplier, even though column C indicates less than one. It is estimated that each parcel has less than 1 appliance with CFCs. Most properties with CFC appliances no longer contain CFCs.
10. For purposes of calculating this line item, use the whole number 10 as the multiplier, even though column C indicates less than 10. It is estimated that each parcel has less than 10 items of E-Waste. Most electronics were destroyed in the fire.

Schedule

Western States Reclamation (WSR) and our project team will be ready to mobilize as soon as all formalities have been completed and site conditions allow for safe movement of equipment and all stakeholders are comfortable with course of action. Our approach will be to fully maximize the experience and expertise of our team to complete the project safely, efficiently, on-time and achieving all goals of the project.

Our team's approach when mobilizing into a site, once, of course, the proper environmental protocols have been established and air monitoring shows a safe work environment, will be to first remove all hazard trees, white goods, e-waste and other items that need to first be sorted prior to moving in heavy equipment. This sequence of events will only take place if the site is free of asbestors. If the risk for asbestos is present, R8 Environmental will perform the necessary mitigation work to fully clear and dispose the site of any asbestos contaminated debris. Once a safe work zone has been established, we will mobilize in with the heavier equipment for the remainder of the demo and salvage operations.

- WSR has the ability to commit the following:
 - (2) disaster debris removal crews
 - (4) self-owned side dump trailers
 - Other heavy equipment to include hydro seeders, water trucks, etc.
- R8 Environmental, has the ability to commit:
- (2) disaster debris removal crews
- (3) fully equipped asbestos and abatement crews
- We estimate an average of 3 days from start to completion for each parcel depending on structural integrity and what is left standing. Some parcels may only take 1 day, while some may take up to 5 days.
- Both Western States and R8 maintain excellent vendor relationships and are able to escalate the number of crews and equipment depending on size of awarded operational area.
- Arbor Solutions maintains all the necessary equipment for safe and efficient tree removal operations to also include heavy operating equipment:
 - (3) grapple trucks
 - (3) trailer outfits able to haul 160 CY of material in sum
 - (2) 55' bucket trucks
 - Access to horizontal and tub grinding equipment if needed

WESTERN STATES RECLAMATION

Colby Reid

Operations Manager

Industry Experience: 25 Years Time with WSR: 22 Years

During his tenure at Western States there is not much Mr. Reid has not seen or done. He has managed projects in the majority of the Western United States reclaiming land disturbed by pipelines, mines, and floods. Most notably, Mr. Reid is regarded as an industry pioneer in developing aerial seeding and mulching applications for post-wildfire emergency stabilization. To date, Mr. Reid has overseen **over \$36 million** in contract volume on projects related to post-wildfire stabilization and has provided consultative services nationwide on fire related projects.

Mr. Reid considers projects with quick response times, a lot of moving parts and tight deadlines the most fun and challenging as they require outside of the box thinking and ingenuity. None encompass these characteristics more than the post-wildfire projects WSR has completed over the years.

Mr. Reid will serve as the lead point of contact throughout the duration of the project.

Mr. Reid holds a B.S. in Environmental Restoration & Waste Management with a Minor in Geology from Mesa State University (now Colorado Mesa University) in Grand Junction.
